

2021 Accelerator Companies

High throughput time lapse imaging of single cells with combined transcriptomic and proteomic analysis

Exosome isolation platform enabling next generation biotechnology

IoT devices and cloud analytics to empower life science laboratory R&D and Operations

Enrich develops groundbreaking fluidics-free cell isolator that enables capturing meaningful clones based on cell behavior and morphology

Epigenomic solutions that are quantitative, scalable for drug development and personalized medicine

Single-molecule next-generation protein sequencing

Microfluidic device and system for generating cells from tissues for single cell diagnostics

Eliminating guess work in pharma & biotech research by directly measuring interactions in crude biological samples

Trans-Membrane Protein Synthesis platform that can produce pure protein in hours

Stellate Gatalysts™ for safe and precise genomic integration of large payloads
